Sum Liquid Application

Measurements:

Flowmeter sensors measure the actual flow in either two separate lines or in a compound flowmeter. A temperature sensor can also be installed to correct for UVC or STRO linearization of turbine flowmeters.

Calculations:

The sum of the flow is calculated using the flowmeter frequency output and the user entered K-Factor.
 Sum Flow = Flow 1 + Flow 2

NOTE: Additional calculations are used for Corrected Volume and Mass applications

Output Results:

- Display Results
 Flow 1, Flow 2, Sum Flow Rates, Resettable Totals, Non-Resettable Totals
- Analog Output
 Sum Rate or Sum Total
- Pulse Output
 Sum Total
- Relay Outputs
 Sum Rate or Sum Total Alarms

Applications:

The Flow Computer can monitor actual sum of two flow rate and two totals of any liquid. (Common applications include compound flowmeters) Flow alarms are provided via relays and datalogging is available via analog (4-20mA) and serial outputs.

Calculations

Pulse Input; Average K-Factor

$$\text{Supply 1 or Supply 2 Flow} = \frac{\text{input frequency} \cdot \text{time scale factor}}{\text{K-Factor}}$$

$$\text{Sum Flow} = \text{Supply Flow 1} + \text{Supply Flow 2}$$
